

Alarm Log — "Alarm Cause (filter)" now supports OR / AND

The **Alarm Cause (filter)** box on the **Alarm Log** dashboard now understands the words `or` and `and`, so you can match on multiple alarm-cause terms in one filter.

How to use it

What you type	What it matches
<i>(blank)</i> or <code>%</code>	All alarms (no cause filter)
<code>CDP</code>	Causes containing CDP (substring)
<code>CDP or DEVICE</code>	Causes containing CDP <i>or</i> DEVICE (either)
<code>CDP and DUPLEX</code>	Causes containing CDP <i>and</i> DUPLEX (both)
<code>LSP or BGP or OSPF</code>	Any of the three (up to 4 terms)

- **Case-insensitive** — `cdp`, `CDP`, `Cdp` all work, and so do `OR` / `AND`.
- **Substring match** — `CDP` finds `%CDP-4-DUPLEX_MISMATCH...` (no wildcards needed).

- The operator is the **whole word** `or` / `and` surrounded by spaces, so a cause that merely *contains* the letters "and" (e.g. `...command...`) is not treated as an operator.

Notes / limits

- Up to **4 terms** per filter (e.g. `a or b or c or d`).
- Use **either** `or` or `and` in a single filter — don't mix them in one expression (e.g. avoid `A and B or C`).
- Hover the ⓘ on the filter label for a built-in reminder of the syntax.

How it works (for the team)

Implemented purely with `LIKE` + `SUBSTRING_INDEX` term-splitting in each panel

query — **no regex** — so it is safe against alarm titles that contain regex

metacharacters (≈99% of titles do) and does **not** break the Top-N → Alarm Log

drill-down, which passes a full alarm title into this same filter. Verified

against the live database: **CDP or DEVICE** = exact union of **CDP** + **DEVICE** ;

CDP and DEVICE = 0; full-title drill-down still resolves. Applies to all Alarm

Log panels (5 stat tiles, the per-day chart, and the Alarm Log table).
