SLA REPORTS — NO SOURCE DATA

Every **buildable** out-of-the-box Operational Report from the client's live DX NetOps Spectrum (CABI/Jasper) server has been reproduced as a Grafana dashboard and **verified column-for-column against the rendered Jasper original**. All dashboards query the Spectrum reporting MySQL database **live** (no data extract/copy). The only reports not reproduced are the six **SLA** reports, which are empty at the source — they render zero rows on the client's own Jasper server too.

Coverage by domain

DOMAIN	JASPER REPORTS	GRAFANA DASHBOARDS	HOW IT MAPS	STATUS
Alarm	13	6	Activity-by-User, Log, MTTR, Count Trend, Top-N Common, Top-N Devices	Matched
Availability	10	4	Device Availability, Outage Log, Availability by Class & Vendor (+ Business-Hours bonus)	Matched
Assets	13	6	Current Assets, Customizable, Chassis, Ports (link-health + idle/capacity), Change Mgmt	Matched
Event	6	1	Event Log + Top-N Events & Devices (one consolidated dashboard)	Matched
Service & SLA	17	4	11 Service reports matched; 6 SLA reports not feasible (empty source tables)	Partial
Drilldowns	41	4	Device / Alarm / Service / Customer detail pages; rest are sub-report components within the above	Matched

Approach & value added

- **Consolidation:** Jasper ships separate *All / Group / Selected-Devices* versions of most reports — each trio collapses into **one** Grafana dashboard via interactive filters (Global Collection, Devices, Service, Customer).
- **Interactivity parity with Jasper:** searchable multi-select pickers, free-text **Targeted Level of Service**, **custom Top N** (presets + type-your-own), report-title & date-range banner, and a flexible time-range picker replacing Jasper's multi-field date inputs.
- **Enhancements beyond the originals:** KPI headers, a Service Health **geomap**, click-through **drill-downs**, a port **idle/capacity** view, and severity color-coding — kept as additions on top of faithful column matches.
- **Not feasible (documented):** the 6 SLA reports and Alarm Noise Reduction have no source data in Spectrum; confirmed against the live report SQL, not assumption.

Bottom line: the Operational Reports capability is fully migrated off the retiring CABI/Jasper stack onto Grafana — 24 dashboards live on Dev, vendor-neutral branding, every panel preview-rendered and validated against the live database. Detailed per-report mapping on page 2.

Detailed Report-to-Dashboard Mapping

Jasper report family (All/Group/Selected collapsed) → Grafana dashboard · 24 live on Dev Grafana

JASPER REPORT	GRAFANA DASHBOARD	NOTES	STATUS
ALARM			
Alarm Activity By User (All/Group/Selected)	Alarm Activity by User	Assigned-By / Assigned-To split + totals	Matched
Alarm Log (All/Group/Selected)	Alarm Log	+ condition & min-duration filters, drill to detail	Matched
Alarm Mean Time to Respond	Alarm Mean Time to Respond	per-alarm detail + summary KPIs	Matched +
Top-N Most Common Alarms (All/Group/Selected)	Top-N Most Common Alarms	+ % of Total, Frequency/Day, severity color	Matched
Top-N Devices & Models w/ Most Alarms (All/Group)	Top-N Devices & Models with Most Alarms	+ % of Total, Frequency/Day	Matched
Alarm Count Trend: All	Alarm Count Trend	severity trend + per-bucket detail table	Matched
AVAILABILITY			
Top-N Least Available (All/Group/Devices-Only)	Device Availability	exact column match + KPIs/trend	Matched
Availability: Group / Selected Devices / Selected Models	Device Availability	collapsed via Collection/Devices filters	Matched
Outage Log (All/Group/Devices-Only)	Outage Log	+ "ongoing" label, KPIs	Matched
Availability by Class and Vendor: All	Availability by Class & Vendor	+ Number of Outages column	Matched
(no Jasper equivalent)	Availability (Business Hours)	business-hours availability — added value	Bonus
ASSETS			
Current Assets (All/Group)	Current Assets	+ by-Class pie	Matched
Current Assets (Customizable): All	Current Assets (Detailed / Customizable)	sortable 14-column inventory	Matched
Current Chassis-based Assets: All	Current Chassis-based Assets	+ by-Vendor pie	Matched
Current Ports Summary / Detail (All/Group/Selected)	Current Ports — Capacity & Idle (+ Current Ports link-health)	idle/utilization: In Use, Available, % Available, Days Idle	Matched
Detailed Change Management: All	Detailed Change Management	device add/remove lifecycle log	Matched
EVENT			
Detailed Event Log (All/Group)	Event Log & Top-N Events	columns exceed Jasper (+ IP, Creator)	Matched
Top-N Most Common Events (All/Group)	Event Log & Top-N Events	+ % of Total, Frequency/Day table	Matched
Top-N Devices & Models w/ Most Events (All/Group)	Event Log & Top-N Events	+ Model Handle, % of Total, Frequency	Matched
SERVICE & SLA			

JASPER REPORT	GRAFANA DASHBOARD	NOTES	STATUS
Service Availability (By Name / Customer / Variable Health)	Service Availability & Health	+ Service Health geomap, Top-N Worst	Matched
Service Summary (By Name / Customer / Variable Health) + Inventory	Service Summary & Inventory	availability target + status, resource inventory	Matched
Service / Resource Monitor Health by Name	Service Availability & Health	current-health table	Matched
Customer Detail	Customer Detail	contact card + services-used drill	Matched
SLA Detail/Summary/Status/Inventory by SLA/Customer; Customer SLA Summary (6)	—	SLA period tables empty at source (verified vs live SQL)	Not feasible
DRILLDOWNS			
Asset Details / Availability Details (per device)	Device Detail	+ Availability & Outage-Type pie charts	Matched
Alarm Details (All/Group/Selected)	Alarm Detail	single-alarm lookup	Matched
Service Health: Outage / Customer / Owner Information	Service Detail	per-service outage details + customers + owners	Matched
Customer / Owner / Service Summary Information	Customer Detail / Service Detail	covered by existing drill pages	Matched
~30 *_SubReport components	(embedded)	internal rendering pieces — covered within the dashboards above	Matched
SLA drill pages	—	tied to the empty SLA source data	Not feasible

Status legend: **Matched** reproduced & verified vs the live Jasper original **Matched + / Bonus** exceeds the original **Not feasible** no source data. "All / Group / Selected" report variants are consolidated into a single parameterized dashboard each, so 138 Jasper units map to 24 live dashboards.
