GRAFANA DASHBOARDS

#	CABI / JASPERREPORTS REPORT	GRAFANA DASHBOARD	HOW IT'S COVERED	STATUS
1	Service Inventory	Service Availability & Health	“Service Inventory” panel (services → resources)	Migrated
2	Service Summary by Service Name	Service Availability & Health	Availability table + \$service filter	Migrated
3	Service Availability by Service Name	Service Availability & Health	Availability % + outages, \$service	Migrated
4	Service Summary — Variable Health Level	Service Availability & Health	\$downStates health-level picker	Migrated
5	Service Availability — Variable Health Level	Service Availability & Health	\$downStates picker + availability	Migrated
6	Service or Resource Monitor Health by Name	Service Availability & Health	Current Health column + Service Health geomap	Migrated
7	Top-N Worst Performing Services	Service Availability & Health	Top-N Worst Performing barchart (by downtime)	Migrated
8	Customer Detail	Customer Detail	Contact card + services-used table	Migrated
9	Service Summary by Customer	Customer Detail (+ Service Avail.)	\$customer scope → services table	Migrated
10	Service Health by Customer	Customer Detail (+ Service Avail.)	\$customer scope → current health	Migrated
11	Service Availability by Service Customer	Customer Detail (+ Service Avail.)	\$customer scope → availability %	Migrated
12	SLA Detail by SLA Name	—	Source empty: sm_slaperiods / sm_guaranteeperiods	Not feasible
13	SLA Summary by Customer	—	No SLA period data (engine never run)	Not feasible
14	SLA Status Current and Recent by Customer	—	No SLA period data	Not feasible
15	SLA Inventory by SLA Customer	—	No SLA guarantee data	Not feasible
16	SLA Detail by Customer	—	No SLA period data	Not feasible
17	Customer SLA Summary	—	No SLA period data	Not feasible

11 of 17 reports migrated into 2 dashboards. The 6 SLA-compliance reports are not feasible: the SLA engine was never run in this environment — sm_slas holds only placeholders and all period/guarantee tables are empty. Independently confirmed by the existing team's “Spectrum Service Manager” dashboards, which also avoid the SLA tables. · Built from the original JasperReports SQL against the Spectrum Reporting datasource; all panels validated on Dev Grafana.
